Project Name	Employee Raise Issue – Record Producer & Service Portal Integration
Maximum Marks	4 Marks

Project Overview

Project Name

Employee Raise Issue – Record Producer & Service Portal Integration

Project Description

The project provides employees with a centralized ServiceNow Service Portal interface to raise workplace-related issues through a Record Producer. The Record Producer captures structured issue information and creates a record in the custom Employee Issue table while applying configured field validations, UI Policies, and Category–Subcategory dependency.

Project Version

Version 1.0

Testing Period

15 August 2026 to 15 August 2026

Testing Scope

Features and Functionalities Tested

- Access to the Employee Raise Issue service through the Service Portal.
- Display and operation of the Employee Raise Issue Record Producer.
- Requester selection.
- Category and Subcategory selection.
- Category–Subcategory dependency.
- State handling through the Record Producer variable.
- Short Description validation.
- Submission of the Record Producer.
- Creation of the Employee Issue record in the custom table.
- Validation of configured UI Policy behaviour and field restrictions.

User Stories / Requirements Tested

US-01: As an employee, I want to access the Employee Raise Issue service from the Service Portal so that I can submit a workplace-related issue.

US-02: As an employee, I want to provide requester, category, subcategory, state, and short description information so that my issue is captured in a structured format.

US-03: As an employee, I want Subcategory options to depend on the selected Category so that I can select an appropriate issue classification.

US-04: As an employee, I want the required validation to be applied before submission so that incomplete issue information is not submitted.

US-05: As an employee, I want my submitted information to create an Employee Issue record so that the issue can be managed in ServiceNow.

Testing Environment

URL / Location

[ServiceNow Employee Raise Issue Service Portal / Requesting Portal](#)

Credentials

Authenticated ServiceNow user with access to the Employee Raise Issue Service Portal and Record Producer.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Access Employee Raise Issue service from Service Portal.	1. Open the ServiceNow Requesting Portal. 2. Navigate to the Employee Raise Issue service. 3. Open the service.	The Employee Raise Issue Record Producer opens successfully and displays the configured fields.	The Employee Raise Issue Record Producer opened successfully and displayed the configured fields.	Pass
TC-002	Submit an Employee Issue with valid information.	1. Open the Employee Raise Issue Record Producer. 2. Select a valid Requester. 3. Select Category and Subcategory. 4. Provide a valid Short Description. 5. Submit the form.	The submission is accepted and an Employee Issue record is created with the submitted information.	The submission was accepted and the Employee Issue record was created successfully.	Pass
TC-003	Verify Category– Subcategory dependency.	1. Open the Employee Raise Issue Record Producer. 2. Select a Category. 3. Open the Subcategory field. 4. Observe the available Subcategory values.	The Subcategory options correspond to the selected Category.	The Subcategory options were displayed according to the selected Category.	Pass
TC-004	Verify Short Description validation when State is New.	1. Open the Employee Raise Issue Record Producer. 2. Keep State as New. 3. Leave Short Description empty. 4. Attempt to submit the form.	The Short Description field is treated as mandatory and the submission is prevented until the required information is provided.	The Short Description field was treated as mandatory and the submission was prevented until the required information was provided.	Pass
TC-005	Verify successful submission after providing the	1. Open the Employee Raise Issue Record Producer. 2. Keep State as New. 3. Enter a valid Short Description.	The validation is satisfied and the Employee Issue record is created successfully.	The validation was satisfied and the Employee Issue record was created successfully.	Pass

	required Short Description.	4. Provide the remaining required information. 5. Submit the form.			
TC-006	Verify that submitted information is mapped to the Employee Issue record.	1. Submit the Employee Raise Issue Record Producer with identifiable test values. 2. Open the created Employee Issue record. 3. Compare the submitted values with the corresponding fields.	The submitted Record Producer values are transferred to the corresponding Employee Issue fields.	The submitted values were transferred to the corresponding Employee Issue fields.	Pass
TC-007	Verify State variable behaviour.	1. Open the Employee Raise Issue Record Producer. 2. Observe the State variable behaviour. 3. Submit an issue using the configured State value. 4. Open the created Employee Issue record.	The configured State value is applied to the created Employee Issue record.	The configured State value was applied to the created Employee Issue record.	Pass
TC-008	Verify the Record Producer creates a record in the intended custom table.	1. Submit an Employee Issue through the Service Portal. 2. Navigate to the Employee Issue custom table. 3. Locate the newly created record.	A new record is created in the Employee Issue custom table with the submitted information.	A new Employee Issue record was created in the custom table with the submitted information.	Pass

The screenshot shows a web form titled "Employee raises issue" with the ID "EMP0001015". The form contains the following fields and values:

- Number:** EMP0001015
- * Requester:** Fred Luddy
- Category:** Hardware
- Subcategory:** Laptop
- * Short Description:** Test Case TC-006
- State:** New
- Priority:** Medium
- Assignment Group:** Hardware

At the bottom of the form, there are "Update" and "Delete" buttons, and a link for "SN Utils | Versions (0)".

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
